## Interesting papers 6

Parasites reduce predation on their hosts ([Peacock et al 2013](#)).

Limited functional redundancy in microbial communities ([Miki et al 2013](#)).

Competition explains why organisms are smaller when warmer ([Reuman et al 2014](#)).

Developing quantitative network metrics ([Ulanowicz et al 2014](#)), pioneered by [Bersier et al \(2002\)](#).

Predicting extinctions using single species data, even when there are other species around ([Ferguson & Ponciano 2014](#)).

Revolutionising nitrogen stable isotope analyses of food webs ([Hussey et al 2014](#))?

Interspecific interactions (ant-plant mutualism) altered by environmental change ([Warren & Bradford 2014](#)).

Increased CO2 makes fish stupid ([Chivers et al 2014](#)).
