Interesting papers 9

Including environmental feedbacks in food web models ([Sanders et al 2014](#)).

Induced offences creates intra-guild predation ([Banerji & Morin 2014](#)).

Don't forget ecosystem process effects on biodiversity ([Lanari & Coutinho 2014](#)).

Mice alter their foraging behaviour dependent on risk of predation ([Orrock & Fletcher 2014](#)). (Careful of why though.)

Being large and or flying leads to a long life ([Healey et al 2014](#)).

Herbivory removes negative effects of nutrients on plant diversity ([Borer et al 2014](#)).

Species loss not responsible for weak diversity-stability relationship ([Hautier et al, 2014](#)).

Browner Congo ([Zhou et al 2014](#)).

A general ecosystem model, including (nearly) every individual organism on the Earth ([Harfoot et al 2014](#)).

Higher CO2 speeds up decomposition ([van Groenigen et al 2014](#)).

Simple rules for food web stability ([Neutel & Thorne 2014](#)).
